

@May 2, 2022 DB 왜래키 table 생성

오늘도 재미있는 DB수업이다.

정말 기대가된다.

```
create table Employee(  
    empno number,  
    name varchar2(20),  
    phoneno varchar(20),  
    address varchar2(20),  
    sex varchar2(20),  
    position varchar2(20),  
    deptno number,  
    primary key(empno),  
    foreign key(deptno) references Department(deptno)  
);  
  
create table Department(  
    deptno number,  
    deptname varchar2(20),  
    manager number,  
    primary key(deptno)  
);  
  
create table Project(  
    projno number,  
    projname varchar2(20),  
    deptno number,  
    primary key(projno),  
    foreign key(deptno) references Department(deptno)  
);  
  
create table Works(  
    empno number,  
    projno number,  
    hours_worked number,  
    primary key(empno, projno),  
    foreign key(empno) references Employee(empno),  
    foreign key(projno) references Project(projno)  
);
```
